## Letter from the Presidents

**We did it!** One of our main goals for 2008 is to revive the Northern California Chapter by increasing activities and networking opportunities among the members. On February 7, old and new SESHAs members gathered at Stanford Linear Accelerator Center to listen to speakers discussing various topics ranging from Risk Management to Solar with the theme of sustainability at our Mini-Conference. We received positive feedback from over 30 attendees. Most of the attendees indicated strong interest in learning more about solar technology. Therefore, we are planning our next meeting to include speakers on solar technology and emission abatement technology. Please mark your calendars for our next meeting in May (date to be determined) on solar-related technology.

Proceedings from the Mini-Conference held February 7, 2008 are online at the SESHAs website. The links are attached below.

### 2008 Northern California Mini-Conference Proceedings
